

Amendments to the Specification:

Please amend the paragraph starting on page 8, line 28 as follows:

The host computing system **130** is accessible by consumers each having a general-purpose computer **110** as illustrated. The computer **110** may be desktop, laptop, personal digital assistant (PDA), mobile phone or an Internet-enabled appliance or the equivalent. The computer **110** supports standard communication protocols comprising Hypertext Transfer Protocol (HTTP), Multipurpose Internet Mail Extensions (MIME), Transmission Control Protocol/Internet Protocol (TCP/IP), and Mobile IP. The CPU **111** also provides the functional support for an Internet browser or other type of graphical user interface (GUI) at the consumer display **113**, a computer monitor for example, through which the consumer interacts with the host computer. The computer uses Internet browsers. Typical Internet browsers operable with the computer **110** include products sold under the trademarks of MICROSOFT® INTERNET EXPLORER®, NETSCAPE® and MOSAIC®. The I/O **112** may include a keyboard, a pointing device (e.g., a mouse, a track ball, a pen device, or the like) as well as the hardware and software necessary to support communication between the consumer and the Internet, and may include a conventional dial-up modem, cable modem, digital subscriber line (DSL) or wireless interface in conjunction with an Internet service provider. The browser typically provides a GUI having a pointer that may be maneuvered about a screen to select various graphical icons to invoke features of the Internet browser. The graphical icons may represent, for example, hyperlinks to various uniform resource locators (URL) or pull down menus, such as a file menu or a bookmark menu, for interfacing with the Internet and the Internet browser. The one or more consumer computing systems may also have electronic access to printing devices.
